Summary

Driven Full-Stack Developer with a strong technical background dating back to 2017 and a University of Helsinki Full Stack Open Certification. Experienced in building complete web applications using React, TypeScript, and Node.js. Highly self-motivated, with a proven track record of managing freelance client contracts and developing complex, state-heavy internal applications from scratch.

Skills

Frontend	Backend
React, TypeScript, JavaScript, HTML5, CSS3, TailwindCSS, Next.js, Redux, React Query	Node.js, Express, REST APIs, API Integration, Authentication (JWT)
Databases	Tools
MongoDB, Supabase, SQL, PostgreSQL	Git, GitHub, VS Code, Vercel

Experience

Fiverr	May 2025 – August 2025
Frontend Developer	
- Worked with an international client on Fiverr for 4 months, turning their wireframes into clean React and TypeScript components. - Communicated directly with the client to make quick, last-minute changes based on their feedback and requests. - Built the frontend for real-time messaging using WebSockets, and handled user roles, authentication, and payments.	
Webváltó Kft.	January 2023 – April 2023
Software Developer Intern (Dual Training)	
- Selected as 1 of 15 developers out of the interview process to participate in this program. - Worked in an Agile team of 5+ developers, participating in weekly meetings and sprint reviews. - Collaborated directly with the backend developer to connect APIs and handle data flow.	

Projects

Noda	January 2026 – Present (In Progress)
Tech Stack: React, TypeScript, Tailwind CSS, Supabase, Resend	
- Implemented client-side routing using React Router to manage multi-page user flows and protected auth states. - Created multiple user roles, secure authentication, and role-based navigation. - Built a custom frontend dashboard using shadcn/ui and Tailwind CSS for a responsive layout. - Integrated Supabase for database management and user auth, and used the Resend API to automate emails.	
GamingWithMe	June 2025 – August 2025
Tech Stack: React, Node.js, Express, MongoDB, Socket.io	
- Engineered real-time, bi-directional communication channels using Socket.io to manage instant player messaging and matchmaking queues. - Developed a dynamic backend sorting system in Node.js/Express that uses MongoDB queries to instantly filter users based on game ranks. - Added smooth interface transitions and animations using Framer Motion to elevate the interactive feel of the matchmaking lobby.
